DRIVESAVER™ VIBRATION-REDUCING COMPONENTS

Absorbs vibration, reduces noise. Saves Your Powertrain.

The DRIVESAVER™ provides a flexible, non-metallic barrier between your transmission and propeller shaft. This barrier reduces drivetrain vibration, resulting in reduced noise to you, your crew and the water. As a result, you and your vessel are more efficient in a quieter environment.

ABSORBS SHOCK

The DRIVESAVER™ effectively absorbs thrust and torque from the propeller shaft, as well as excessive shock from changing gears and high speed planing. It also helps control damage and misalignment from torsional engine movement. And, the DRIVESAVER™ keeps on working, under normal conditions, for the life of the drivetrain, without any lubrication or maintenance.

PREVENTS ELECTROLYSIS

The DRIVESAVER™ provides an impervious barrier that blocks electrical currents from the water. Your engine and transmission are protected from damaging corrosion.

ACTS LIKE A "CIRCUIT BREAKER"!

The DRIVESAVER™ absorbs extreme shock and torque usually caused by a hidden log, line, or rock. The Drivesaver is designed to break apart, leaving your transmission and engine intact. That's right, the DRIVESAVER™ gets destroyed, not your costly transmission and engine. And, you're back in operation fast with minimum cost and downtime. That's the kind of total protection you can't afford to be without!

INSTALLS EASILY

The DRIVESAVER™ installs simply and quickly. No cutting or machining is required. And, you don't have to haul your boat out of the water. Just separate the drive flanges, insert the coupling, align the Drivesaver and bolt it together. It's that easy.

FIND THE RIGHT DRIVESAVER™ FOR YOUR BOAT

To determine the proper [DRIVESAVER™](#) model for your boat, select your drivetrain manufacturer from the links below. Once you have the DRIVESAVER™ model number, click on the Model number to get the full specifications.
